KMEANS CLUSTERING

➢ The optimal number of clusters formed were 2 which was determined using the Elbow Method.

➢ Davies-Bouldin Index is 0.7283881661006848, where the lower the index, the better the indication of well-separated clusters.

➢ Contrastingly, the higher Silhouette Score means better-defined clusters. Here, the score is 0.48983356575701203.

➢ And, Inertia is 6.333761552525513.
